Introduction

Let’s Know 99 Technologies

99 Technologies is an industry-leading digital solutions company working as a technology partner across the lifecycle of a project - strategy, build, and ongoing support. We serve global companies with:

- Digital Transformation (Web and App Development, UI/UX, Content, SEO, and Social Media),
- Software Development & AI (Decom Robotics, Custom Software, Artificial Intelligence Solutions, Data Analytics),
- Outsourcing & Offshoring (IT Outsourcing, Administrative Offshoring, and Specialized Services).
- Data Sanitization (ADISA-certified Data Destruction)
- Marketplaces (E-Commerce Solutions)
- ERP Solutions

Our global satisfied clients include Minnesota Computers, PC Mart, SJ Computers, EZ on the Earth, Lighting Resources Inc, and Recycle Technologies, among others. With teams across the United States, the UAE, and Pakistan, we've grown to over 200 people delivering work for more than 50+ active clients.

Mission & Vision Statements

Mission

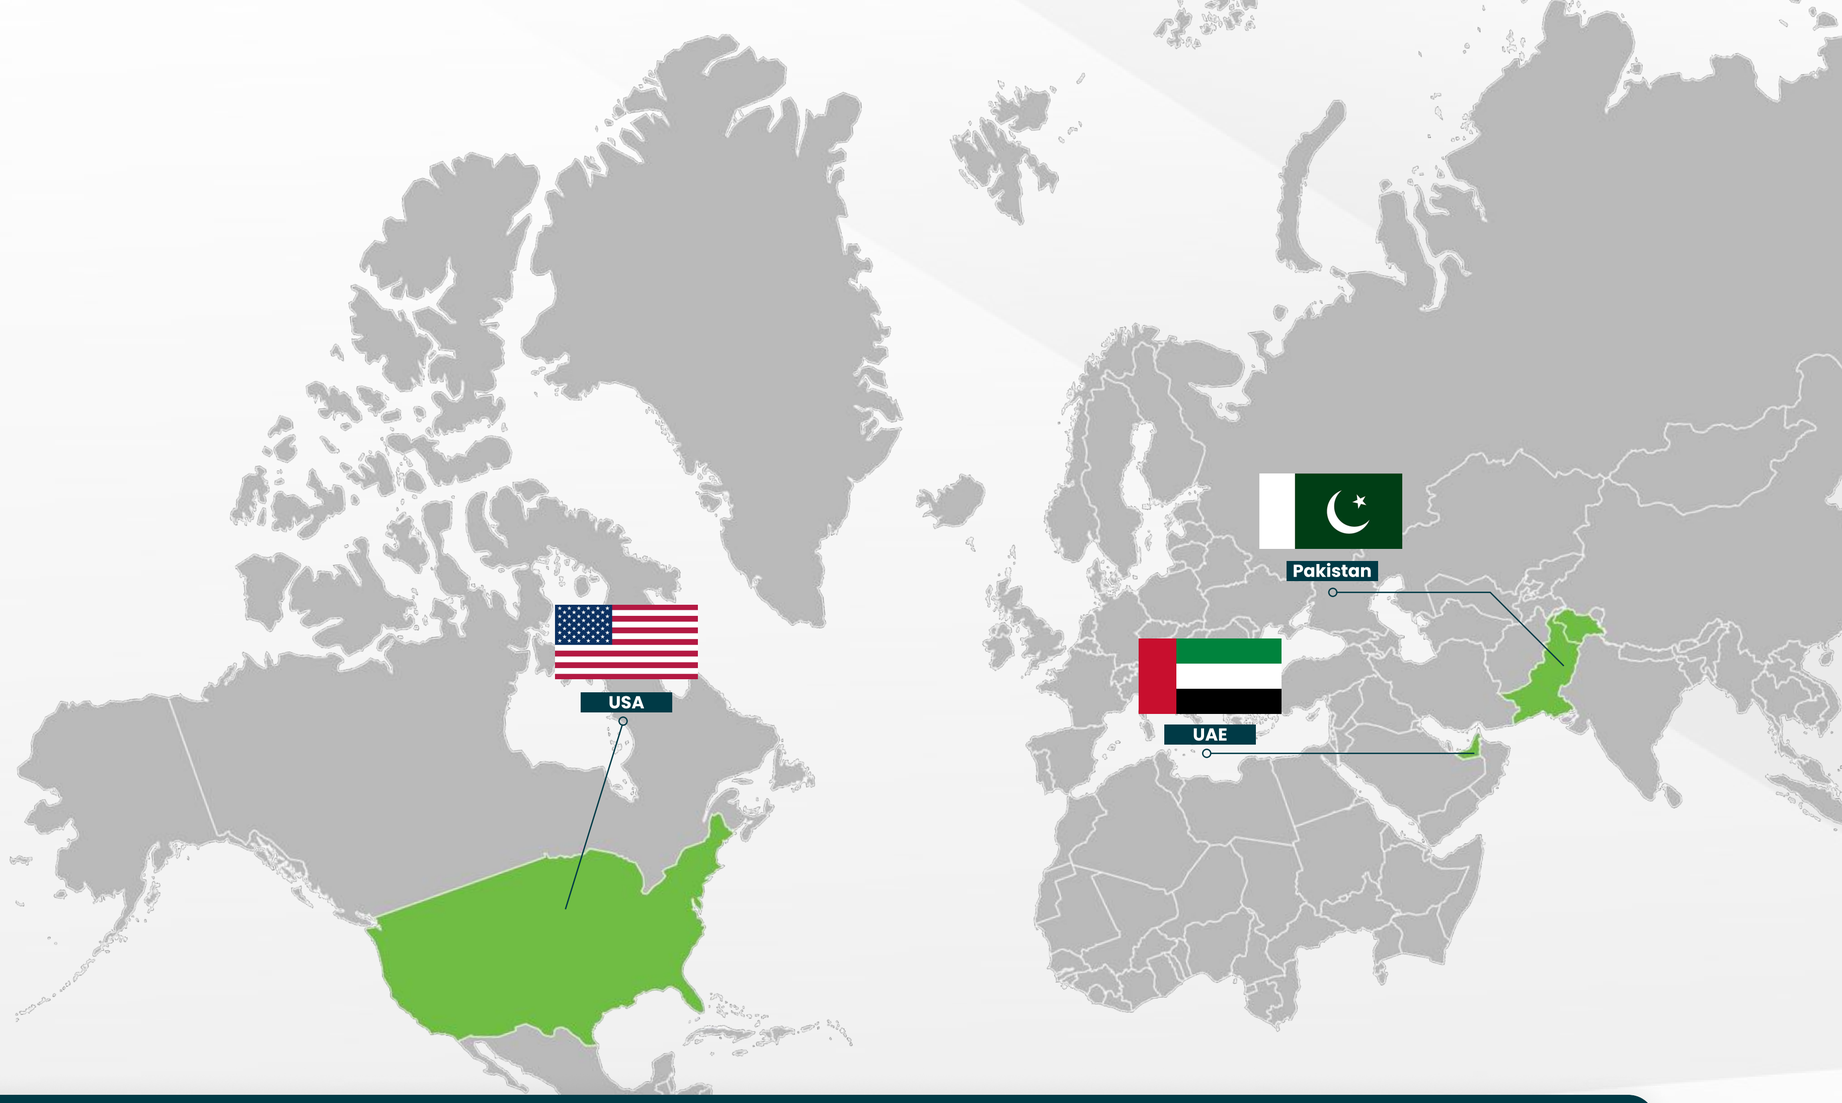

is to give businesses the technology partner they'd otherwise have to build in-house - combining strategy, engineering, and AI capability into solutions that are built around the client's actual operations, not adapted from a generic template.

Vision

is to be a global digital transformation partner that businesses return to project after project, known as much for reliability and craftsmanship as for technical capability.

Where We Operate

99 Technologies operates from three countries: our home base in Eagan, Minnesota, the USA, an office in Dubai, the UAE, and operations in Islamabad, Pakistan.

What Makes Us Unique

We work across the whole stack, not one slice of it

A client doesn't need to go to one shop for the website, another for the backend, a third for AI features, and a fourth for ongoing IT support - we cover digital transformation, software and AI development, and outsourcing under one roof.

We build for how the business actually runs

GreenLoop ERP is the clearest proof of this: rather than selling a recycling client a generic inventory tool, we built five connected modules - data sanitization, refurbishment automation, warehouse management, shipping, and accounting - that mirror the exact sequence a device moves through on their floor.

Global delivery, real accountability

With teams in three countries, we can staff a project the way it actually needs to be staffed - strategy and client relationship close to home, engineering and QA at scale offshore - without losing a single point of contact.

Depth in AI and data, not just app development

Our Software Development & AI practice goes beyond building interfaces; it covers artificial intelligence solutions and data analytics work aimed at making a client's existing operations smarter, not just digitized.

Certified & compliant services

ADISA, R2V3, & RIOS Certified, and NIST 800-88, HIPAA, and GLBA compliant services, 24/7 customer support - a full chain of custody serving your requirements under one roof, offering great peace of mind.

Services

- Digital Transformation
- Technical Solutions
- Software Development
- Decom Robotics
- Outsourcing & Offshoring
- Data Sanitization (ADISA-certified Data Destruction
- Marketplaces (E-Commerce Solutions)
- ERP Solutions
- VOIP Solutions
- CRMS Solutions
- Database Management Solutions
- Client Management & Support
- Sales & Support Solutions
- ITAD Solutions
- Lead Generation Solutions
- Web Development
- App Development
- UI/UX Design
- Digital Marketing
- Content, SEO, & Social Media Management

Industries We Serve

- Telecommunications
- Banking & Financial Services
- Insurance
- Public Sector & Government
- Healthcare & Pharmaceuticals
- Retail & Consumer Packaged Goods (CPG)
- Education & Non-Profit
- IT & Data Centers
- Energy & Utilities
- Transportation & Logistics
- Travel, Tourism & Hospitality
- Manufacturing & Industrial
- Media & Entertainment
- Real Estate & Construction
- Automotive
- Oil & Gas
- Professional & Business Services
- Technology & Software
- Security & Defense
- Agriculture & Agribusiness
- Real Estate & Construction
- Governmental Organizations

Flagship Product

One of 99 Technologies' key products is GreenLoop ERP, a unified platform for the electronics recycling and ITAD industry. It connects intake, compliance, data destruction, refurbishment, warehousing, resale, shipping, and accounting in one system.

Greenloop

Clear

automated, standards-aligned data sanitization (NIST, IEEE, DoD, and other recognized wipe standards), with real-time verification and audit-ready erasure certificates.

BrainBox

refurbishment and imaging automation, taking a device from power-on through BIOS configuration, hardware capture, order matching, Windows imaging, and activation with minimal manual technician work.

StockWise

enterprise inventory and warehouse management, tracking every serialized item from receiving through storage, work orders, and sale.

Marketplaces

centralized marketplace management, connecting multiple online sales channels, synchronizing product listings, pricing, availability, orders, and fulfillment so items can be sold efficiently across marketplaces without duplicate manual work.

ShipNest

a centralized shipping and fulfilment platform connecting multiple marketplaces (Shopify, Amazon, eBay, Walmart, Newegg, Best Buy) with live carrier rate comparison and label printing across UPS, FedEx, and USPS.

AccountWise

financial management that automatically records the accounting impact of sales, purchases, and operations, so finance teams aren't re-entering what already happened on the floor.

Leadership Behind the Vision

Our leadership team brings together strategic vision, operational expertise, and a deep understanding of technology to drive 99 Technologies forward. Together, they shape our direction, strengthen client relationships, and turn complex business challenges into practical, technology-led solutions.

In House Departments

- Software Development
- Compliance
- Marketing
- Tech Support
- Marketplaces Services
- IT Support
- HR & Admin
- Outbound Sales
- Finance
- Lead Generation
- Creative
- Call Quality Assurance
- Internal Audit
- Customer Care
- Service Desk

Technical Specialties

Our engineering teams work across a broad, modern technology stack, chosen project by project based on what actually fits the client's need rather than a fixed default:

Design	Frontend	CMS	Backend	DBMS	QA	DevOps	Ai Tools
Sketch	HTML	WordPress	Node.js	PostgreSQL	Selenium	AWS	Claude
Bitbucket	CSS	Woo Commerce	Nest.js	MySQL	Cypress	Cloud Platform	Codex
Figma	JavaScript	Shopify	Python	MongoDB	Postman	Docker	Gemini
Adobe	TypeScript	Magento	Java			GitLab	Google Flow
	React Native		Laravel			Ansible	Grok
	Next.js					Azure	
	Flutter					Grafana	
	Java						

Areas of Expertise

Web & App Development

from marketing sites to full-scale web and mobile applications.

Custom Software Development

purpose-built systems designed around a client's actual workflow.

Data Analytics & Insights

turning operational data into decisions.

UI/UX Design & Development

interface and experience design for digital products.

Artificial Intelligence Solutions

AI capability layered into existing or new systems.

IT Outsourcing & Offshoring

extending a client's team without the overhead of direct hiring.

Digital Marketing

supporting the digital presence side of a client's business.

Content, SEO & Social Media

supporting the digital presence side of a client's business.

Dcom Robotics

supporting the digital presence side of a client's business.

What our Customers Say

Our engineering teams work across a broad, modern technology stack, chosen project by project based on what actually fits the client's need rather than a fixed default:

Asim Haider

"Onboarding new technicians used to be a paperwork mess. The training matrix means I can prove completion for every employee in seconds."

CEO, PC Mart

Jason Simister

99 Technologies understands how to translate operational requirements into technology that works in practice. Their ability to understand the business first and build around it has made them a strong technology partner for us.

Director of Sales Operations, Lighting Resources LLC

Naseer

GreenLoop ERP gives us the technology foundation we need to manage our operations with greater control and efficiency. 99 Technologies has done an excellent job of understanding our business and delivering a solution that fits the way we work.

COO, Minnesota Computers

Key Strengths Summary

01	**Full-stack digital partner**	Digital transformation, software and AI development, and outsourcing under one roof - no need to coordinate across separate vendors.
02	**Built around the client's actual operations**	GreenLoop ERP shows what this looks like in practice: five connected modules mirroring a real operational sequence, not a generic off-the-shelf platform.
03	**Global delivery model**	Three countries, 200+ team members, and the ability to staff a project with the right mix of client-facing strategy and offshore engineering capacity.
04	**Depth beyond typical dev-shop work**	AI solutions, data analytics, and specialized services like HIPAA-compliant medical billing sit alongside core software and web development.
05	**A track record across serious industries**	Telecommunications, banking and finance, healthcare, retail, and the public sector - not just small business marketing sites.
